

ALLERGY TESTING AND IMMUNOTHERAPY

What is an allergy?

When your immune system mistakenly identifies harmless substances in the environment around you - pollen, dust, grasses - as invaders to your body. This causes your body to produce IgE immunoglobulins and release histamine that can produce several different symptoms, including tearing, sneezing, itchy eyes, rash.

What is Allergy Skin Testing?

After quick application of 72+ different environmental allergens to the skin, we can easily identify what you might be sensitive and allergic to in just 15 minutes.

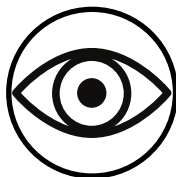

What is Immunotherapy?

We can use your allergy skin testing results to formulate a serum that is unique to your particular allergy profile that can provide a cure to your allergies and provide lifelong relief!
